I. Introduction

Keywords: OPAC 2.0, WeP 2.0, Open Source Software, OPAC

In the past, the OPAC system was mainly used for cataloging and circulation management. However, with the advent of the Web 2.0, there has been a shift towards more user-friendly and interactive interfaces. This has led to the development of new systems that allow users to interact more closely with the library's resources. One such system is the Web 2.0 OPAC, which integrates various features such as social networking, media sharing, and user-generated content.

Bringing Web 2.0 Problems in OPAC

Reference
Searching for information is an extension of the Library of Congress. (O'Reilly, 2002)

There are new users of the Web, the so-called wired people. Wired people are networked with a sense of connectivity, expectation, and experience. They are urban, informed, and Often have a knowledge of the world that is not available to them through the Web. (Schumacher, 2007)

Web 2.0 tools, such as RSS feeds, are changing the way we connect to information. (McKernan, 2009)

2. What is Web 2.0?

Web 2.0 is characterized by its openness to users and its integration with the Library of Congress. (McKernan, 2009)

Discussion

These new tools allow many different people to contribute to an online document, which is a revolution in the way we think about the Library of Congress. (McKernan, 2009)

Web 2.0 tools, such as RSS feeds, are changing the way we connect to information. (McKernan, 2009)
3.2 User Perspective

The ODP is intended to be accessible to people with disabilities. It should be designed to provide information to people with disabilities using text-to-speech software and other assistive technologies. The ODP should also be designed to be accessible to people who use text-to-speech software and other assistive technologies.

5.3 Other Open Source Software

Other Library Collection and Resources

- Institutional Bibliography
- Institutional Repository
- Digital Library Items
- Local Library Journals
- Catalog Records

In addition, libraries have responded by replacing the traditional OPAC with supporting software such as PHP, MySQL, and Perl. This is a library resource portal designed and developed for libraries by libraries. The goal of OVLDC is to enable your users to search and browse libraries. OVLDC is available at http://www/ovlind.org for libraries that wish to enhance their presence on the web. It finds a library resource portal designed and developed for libraries by libraries.
